The best antivirus software for Windows 10?

Which is the best antivirus software? AV-TEST has checked the most common brands of antivirus software for private users running Windows 10.

According to recent figures, there is an average 350.000 new items of malware and potentially unwanted applications appearing every single day. Up-to-date antivirus software is therefore a must!

The independent AV-TEST research institute has checked the most common brands of antivirus software for private users running Windows 10 this spring. The results can be found [here \(https://www.av-test.org/en/antivirus/home-windows/\)](https://www.av-test.org/en/antivirus/home-windows/).

Please note however that tests like these should always be treated with caution. **Much more important than your choice of product is that you keep it up-to-date!**

Further information on protection provided by anti-virus software can be found [here \(https://www.ebas.ch/en/2-monitoring-with-antivirus-software-and-firewall/\)](https://www.ebas.ch/en/2-monitoring-with-antivirus-software-and-firewall/).
