# Phishing attempts using websites in the attachment

**Phishing without any links or documents – when phishers send you a faked website in the shape of a HTM- or HTML-file as an attachment... We explain to you how you can recognise such an attack and protect yourself against it.**

You can find all information on Phishing attempts using websites in the attachment plus some basic information on Phishing in our revised article on [Phishing \(https://www.ebas.ch/en/phishing/\)](https://www.ebas.ch/en/phishing/).
