Adobe Flash Player

Due to its multimedia features, Flash Player was used extensively in the past. The 31st December 2020 though saw the end of its era – with immediate effect, Adobe is no longer supporting Flash Player!

Funny animations, short clips, browser games, etc. – Adobe Flash used to be one of the most important technologies employed on the Internet. Over the past few years though, this software has increasingly fallen into disrepute due to various security problems.

Adobe has now published its very last patch for its Flash Player. As per its [release notes](https://helpx.adobe.com/flash-player/release-note/fp_32_air_32_release_notes.html) (https://helpx.adobe.com/flash-player/release-note/fp_32_air_32_release_notes.html), Adobe is no longer supporting its Flash Player with effect from 31st December 2020. It will also block the execution of any Flash content in its Flash Player from 12th January 2021 onwards.

We would urgently recommend you uninstall your Flash Player immediately (if you still have it installed) to protect your systems.
