Ransomware

You start up your computer – and suddenly, nothing works anymore. You no longer have access to your documents, photos, music or e-mails. Instead, you see a screen with a message demanding you remit some money to access your data...

Ransomware (aka encryption Trojans) has remained pretty common throughout the current pandemic, too. For this reason, we have updated our article on "ransomware (https://www.ebas.ch/en/ransomware-encryption-trojans/) ", adding two chapters called "How to proceed in case of damage" and "Breachstortion". Find out about these matters, and always stay up to date.
