## New S-U-P-E-R campaign

"123456" – is that your password? No doubt you will get closely acquainted with some cyber-criminals soon! You can find out how to protect your access options properly with the help of our new S-U-P-E-R campaign.

The S-U-P-E-R campaign is launched all over Switzerland by the Nationales Zentrum für Cybersicherheit (NCSC), the Schweizerische Kriminalprävention (SKP) and also in co-operation with "eBanking – but secure!". It explains how you can effectively protect your devices and access options against anyone else gaining access.

## **Password manager**

You should be using different and secure passwords (at least 12 characters long, consisting of numbers, upper and lower case letters as well as special characters) everywhere – which is no easy feat. A password manager will help you with this by storing all your passwords in encrypted form.

The video below explains all the advantages of using password managers in a clear manner:

https://www.ebas.ch/wp-content/uploads/2023/04/SKP\_NCSC\_Passwortmanager\_de.mp4

A list of recommended, sometimes free password managers can be found under "<u>Step 4 – protecting online access</u> (https://www.ebas.ch/en/4-protecting-online-access/)" of our "<u>5 steps for your digital security (https://www.ebas.ch/en/</u> <u>5-steps-for-your-digital-security/)</u>".

## Two-factor authentification (2FA)

In addition to a password manager, two-factor authentification (2FA) will provide even more security. In the process, a second, independent security component is requested in addition to the first security component (generally a password) when logging in. This might be a code sent to your mobile phone or generated directly on your device.

The video below explains how two-factor authentification (2FA) works:
