# VPN (Virtual Private Network)

**The Internet takes away more and more of our privacy. Data disclosed by our browsing behaviour, e.g. our search requests are used by both organisations and crooks for their own ends, such as market analyses or criminal machinations. Such data can be protected by a VPN (Virtual Private Network).**

Read our new [article \(https://www.ebas.ch/en/vpn-virtual-private-network/\)](https://www.ebas.ch/en/vpn-virtual-private-network/) on what is behind all this, and how to safely use a VPN.
