# Keep your devices and data healthy!

Under the motto “Fördern Sie Ihre digitale Gesundheit” (Promote your digital health) the “[S-U-P-E-R.ch](https://www.s-u-p-e-r.ch) (<https://www.s-u-p-e-r.ch>)” campaign raises awareness of the importance of updates and antivirus software.

Do you know which “access doors” are open on your device and which malware can use them to find its way in? Practically none, as long as you have installed antivirus software.

Antivirus software is a security measure you should take on your device. The aim is to recognise and remove known malware which has gained access to your device or network – ideally before it has any chance to embed itself and cause any damage.
