

# Certificate checking: Mozilla Firefox

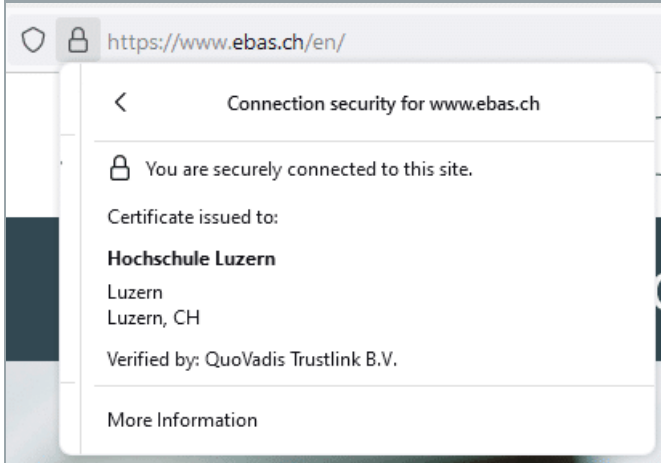

These instructions will explain how to check the certificate fingerprint of a website in a Mozilla Firefox browser.

If you are looking for other browser instructions, you can find these [here \(#OtherBrowsers\)](#).

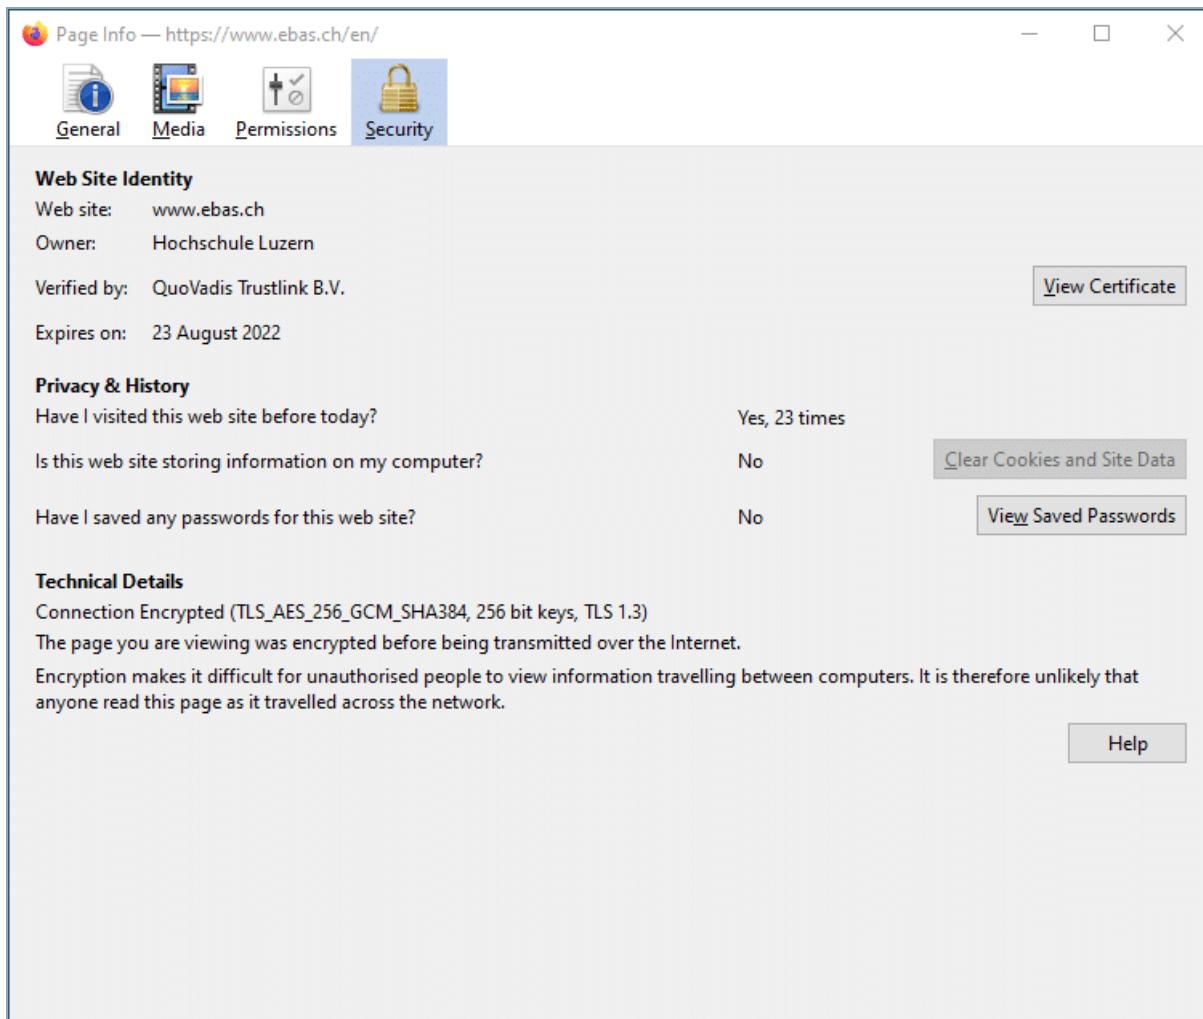

1. Click the **lock** in the address line.
2. Click the **arrow to the right** to display further information.

3. Click **More Information**.

4. Click **View Certificate**.

5. The fingerprint is verified comparing the character set displayed with a reference set which you will have received from your financial institution. If the character sequence read from the certificate and the reference sequence received from your financial institution are identical, this is a genuine certificate. Please note when comparing the fingerprint type: The sequence and reference sequence must be of the same type (SHA-256 or SHA-1 respectively). You will find our partner banks' certificate fingerprints on our website in our article on [Certificate Checking \(https://www.ebas.ch/en/checking-certificates/\)](https://www.ebas.ch/en/checking-certificates/) .
