

Instagram Settings

Instagram offers a multitude of configuration options. It is not always easy to keep track of all the various settings offered and to select the best settings for your purposes. Our checklist is meant to assist you to protect your account and all your published information in the best possible way.

We have tried to draw up as universally applicable a set of instructions for private users as possible. Nevertheless, the individual configuration options and settings may differ in specific cases. This checklist refers to the Instagram settings available as of **9th December 2022** as displayed in a desktop computer browser.

As a rule, the settings described here are automatically adopted in the Instagram app. Depending on your smartphone and operating system though, there may be some additional settings in the app which are not discussed here.

To show the account settings in Instagram, click the three bar symbol at the bottom left and then select entry “settings” from the menu.

Edit profile

Category	Our recommendation
Name	Depending on your requirements
Username	Depending on your requirements
Website	Depending on your requirements
Bio	Depending on your requirements
Email	Use a free address without any indication of your identity (e.g. ferrari397@gmail.com).
